

# K4Community Resident Check-In

## Promoting Your Independence & Comfort

**K4Community Resident Check-In** works passively, or “behind the scenes,” using in-home smart lighting sensors or voice activation with Amazon Alexa to ensure that you are active.

With RCI, you can enjoy your smart home amenity, while staff gain increased visibility of your well-being

Motion Switch

### How it Works

1. Your community installs a non-invasive motion detector\* in your home
2. Between 5 a.m. and 11 a.m., the motion detector recognizes movement, or lack of movement, in your home
3. Your Community Team is alerted daily that either movement was or was not detected

### Caregiver Awareness

- Eliminates unnecessary calls or visits from your Community Team
- Reduces errors involved in manual resident check-in processes
- Reduces false alerts

The motion detector simply detects movement and does not record video or audio.

### Live Independently

- No pull cord or alert button needed to check-in daily with staff
- Passive motion sensing promotes your independence
- Behind-the-scenes process creates a sense of security
